## B. Tech.

(SEM. IV) EXAMINATION, 2007-08

MANUFACTURING SCIENCE - I

Time : 3 Hours]

[Total Marks : 100

- Note :
- (1) Attempt **all five** questions as instructed their.
  - (2) There are choices within. Marks are indicated therein. Answer briefly.

- 1 Answer part (d) and any **two** more from the remainings :
- (a) Why yield criteria is needed ? Show that shear strength  $K$  and tensile strength  $\sigma_0$  are related as  $K = \sigma_0 / 2$  and  $K = \sigma_0 / \sqrt{3}$  through Tresco's and Miser' yield criteria respectively. 5
  - (b) What are the limitations of open-die and closed-die forging processes ? Explain closed-die forging in brief. 5
  - (c) Explain various regimes of cold working and hot working in terms of melting point of the material being formed. 5
  - (d) Derive a relation to obtain the forging force to forging of circular disc with sliding friction condition. 10

2 Answer part (d) and any **two** more from the remainings :

- (a) What do you mean by maximum allowable reduction in wire drawing ? A wire of 1 mm is to be drawn from a rod of 5 mm through a conical frictionless die. How many draws are needed ? 5
- (b) Briefly describe with the help of sketch types of extrusion. List some parts which are made by extrusion. 5
- (c) What are common defects which occurs during forming operations ? Explain in brief. 5
- (d) Explain neutral point in rolling. What is the role of friction before and after neutral point ? Also derive a relation to obtain driving power in rolling. 10

3 Answer any **four** parts :

- (a) Explain the similarities and difference between piercing and blanking. 5
- (b) Explain spring back, in bending of sheet and how it is compensated. 5
- (c) How washers could be made and what types of dies would be employed ? 5
- (d) What do you mean by shearing ? What measures can be employed to improve the quality of a sheared edge ? 5
- (e) Explain briefly the analysis of deep drawing to find drawing force needed OR Explain various deep drawing defects. 5

4 Answer any **four** parts :

- (a) Explain the mechanics and process of electromagnetic forming. 5
- (b) Explain the advantages and applications of powder metallurgy in brief. 5
- (c) Explain different types of locating and clamping devices. 5
- (d) Explain how plastic components are produced by extrusion. 5
- (e) Write short notes on any **two** of the following :  $2\frac{1}{2} \times 2$ 
  - (i) Automization in powder metallurgy
  - (ii) Resin and adhesive
  - (iii) Application of Jig and Fixture.

5 Answer any **four** parts :

- (a) What are different types of pattern allowances ? Explain any one. 5
- (b) Explain "Spree" and "Gati and Runner" as related to casting. 5
- (c) Distinguish between green sand molds and dry sand moulds. 5
- (d) What is the main purpose of Riser ? Explain the consideration for riser design. 5
- (e) Explain the mechanics of solidification in casting of alloys in brief. 5
- (f) Explain in brief the centrifugal casting methods. 5
