TEC-402

(Following Paper ID and Roll No. to be filled in your Answer Book)

PAPER ID: 3082 Roll No.

B. Tech.

(SEM. IV) EXAMINATION, 2007-08

SIGNALS AND SYSTEMS

Time: 3 Hours]

[Total Marks: 100

Note: (1) Attempt all the questions.

(2) All the questions carry equal marks.

- 1 Attempt any four parts of the following:
 - (a) Examine whether the following signal $x(n) = \cos\left(\frac{n}{10}\right)\cos\left(\frac{n\pi}{10}\right) \text{ is a periodic signal or not.}$
 - (b) Consider the system described by $y(n) = x^2(n)$

where x(n) and y(n) are the input and output of the system respectively. Show that the system is a non-linear system.

(c) A system is described by y(t) = t x(t) + 3

where x(t) and y(t) are the input and output of the system respectively. Verify whether the system is a time-invariant or not.

(d) Determine the energy of the signal $x(t) = \cos(10\pi t)u(t)u(t-2)$.

5

$$\delta_{\varepsilon}(t) = \frac{\exp\left(-\frac{t}{\varepsilon}\right)}{\varepsilon}u(t)$$

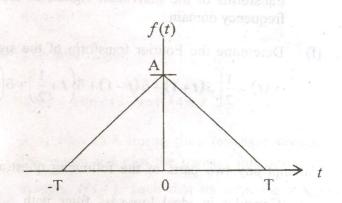

Show that

(e)

has the properties of a delta function in the limit as $\varepsilon \to 0$.

- (f) Find the unspecified constants, denoted by C_1 , C_2 and C_3 in the following expression:
- 108(t) $\cdot C_1 \dot{\delta}(t) + (2 + C_2) \dot{\delta}(t) = (3 + C_3) \delta(t) + 5 \dot{\delta}(t) + 6 \dot{\delta}(t)$ where "•" and "••" over a symbol denote the first and second order time derivatives respectively.
- 2 Attempt any four parts of the following
 - (a) If g(t) is a complex signal given by $g(t) = g_r(t) + j g_i(t)$ where $g_r(t)$ and $g_i(t)$ are the real and imaginary parts of g(t) respectively. If G(f) is the Fourier transform of g(t), express the Fourier transforms of $g_r(t)$ and $g_i(t)$ in terms of G(f).

(b) Determine the Fourier transform of a triangular 5 function f(t) as shown in the following figure.

(c) Find the coefficients of the complex exponential Fourier series for a half-wave rectified sine wave, defined by

$$x(t) = \begin{cases} A \sin(\omega_0 t), 0 \le t \le T_0/2 \\ 0, T_0/2 \le t \le T_0 \end{cases}$$

with $x(t) = x(t+T_0)$.

(d) Determine the impulse response of h(n) for the system described by the second order difference equation

$$y(n)-4y(n-1)+4y(n-2)=x(n)-x(n-1)$$

when
$$y(-1) = y(-2) = 0$$
.

5

- (f) Determine the Fourier transform of the signal 5 $x(t) = \frac{1}{2} \left[\delta(t+1) + \delta(t-1) + \delta\left(t + \frac{1}{2}\right) + \delta\left(t \frac{1}{2}\right) \right]$
- 3 Attempt any two parts of the following questions:
 - (a) Consider in ideal low-pass filter with amplitude and phase-response functions given by

$$|H(f)| = K\Pi\left(\frac{f}{2B}\right) = \begin{cases} K, |f| \leq B \\ 0, otherwise \end{cases}$$

and

$$\angle H(f) = -2\pi t_0 f$$

respectively, where K, t_0 and B are arbitrary constants. Determine the output of the system corresponding to an input signal given by

$$x(t) = A\cos\left(2\pi f_0 t + \theta_0\right)$$

where A, f_0 and θ_0 are constants.

10

- (b) Derive an expression for the impulse response of an ideal band-pass filter with bandwidth B, center frequency f_0 and mid-band gain K.
- (c) The input signal

10

$$x(t) = 4\sin c (2t)\cos^2 (4\pi t)$$

is applied to a linear, time invariant system. Determine and plot the transfer function of the system, H(f), such that its response will be

$$y(t) = 4\sin c(2t).$$

- 4 Attempt any two parts of the following questions:
 - (a) Find the Nyquist frequency and 3+4+3
 Nyquist rate for each of the following signals:

(a)
$$x(t) = \Pi\left(\frac{t}{5}\right)$$
 modified to some

- (b) $x(t) = 4\sin c^2 (200t)$
- (c) $x(t) = -10\sin(40\pi t)\cos(300\pi t)$.

- (i) LTI System
- (ii) Stability condition for LTI System.
- (c) A signal x(t) has the Laplace transform

$$X(s) = \frac{s+2}{s^2+4s+5} \cdot \log \log s$$

Find the Laplace transform of the following signal:

$$y(t) = x(2t-1)u(2t-1)$$

- 5 Attempt any two parts of the following:
 - (a) Using the Z-transform method, solve the difference equation

$$y(n+2)-\frac{3}{2}y(n-1)+\frac{1}{2}y(n)=\left(\frac{1}{4}\right)^n$$
; for $n \ge 0$

with initial conditions y(0) = 10 and y(1) = 4

U-3

[Contd...

(b) Determine the Z-transforms and their region of convergences for the following discrete-time signals.

(1) $x(n) = a^n \sin\left(\frac{\pi n}{2}\right) u(n)$ where a is a real constant.

(2)
$$x(n) = 2^n u(n+2) - 3^n u(-n)$$
.

$$X(z) = \frac{3}{(1-z^{-1})(1+z^{-1})(1-0.5z^{-1})(1-0.2z^{-1})}$$
