## B.Tech.

(SEM. VI) THEORY EXAMINATION 2013-14

## **GRAPH THEORY**

Time : 2 Hours

Total Marks : 50

## Note :- Attempt all questions.

1. Answer any **four** parts :

## $(4 \times 3 = 12)$

- (a) Prove that in a complete graph with n vertices there are (n-1) / 2 edge disjoint Hamiltonian circuit, if n is an odd number ≥ 3.
- (b) Prove that a simple graph with n vertices must be connected if it has more than [(n-1) (n-2)]/2 edges.
- (c) Prove that in a every vertex of degree greater than one is a cut vertex.
- (d) Prove that a non separable graph has a nullity  $\mu = 1$  if and only if graph is a circuit.
- (e) Prove that an Euler graph cannot have a cut set with an odd number of edges.

1

(f) Show that a Hamiltonian path is a tree.

2. Answer any two parts :

> 1 1

- (a) Write Prim's algorithm to find minimal spanning tree.
- (b) Prove that a spanning tree T of a given weighted connected graph G is shortest spanning tree of G if and only if there exists no other spanning tree of G at a distance of one from T whose weight is smaller than that of T.
- (c) (i) Draw planar connected graph such that.
  - e = 3n-6
  - e < 3n-6
  - (ii) Prove that in a nontrivial tree T there are at least two pendant vertices.
- 3. Answer any three parts of the following :  $(6 \times 2 = 12)$ 
  - (a) Prove that a connected planar graph with n vertices and e edges has n e + 2 regions.
  - (b) If every region of a simple planar graph (with e edges and v vertices) embedded in a plane is bounded by k edges, show that e=[k(n − 2)]/k − 2
  - (c) (i) Show that a complete graph of four vertices is self dual
    - (ii) Using Kuratowski's theorem, show that Petersen's graph is nonplanar.
- 4. Answer any four parts of the following :  $(3.5 \times 4 = 14)$ 
  - (a) Prove that covering h of a graph is minimal if and only if h contains no path of length three or more.
  - (b) Prove that vertices of every planar graph can be properly colored with five colors.

ECS505/DQJ-21762

2

(c) Show that the Chromatic polynomial of a graph of n vertices satisfies inequality

 $P_n(\lambda) \leq = \lambda(\lambda - 1)^{n-1}$ 

- (d) If two graphs  $G_1$  and  $G_2$  are 1-isomorphic, prove that the rank of  $G_1$  equals the rank of  $G_2$  and nullity of  $G_1$  equals the nullity of  $G_2$ .
- (e) Show that a simple connected planer graph with 8 vertices and 13 edges cannot be bichromatic.
- (f) Prove that in a transport network G, the value of flow from source S to sink D is less than or equal to the capacity of any cut that separates S from D.
