Printed Pages:03
Sub Code:KMB206
Paper Id: $\qquad$ Roll No. $\square$ MBA
(SEM-II) THEORY EXAMINATION 2018-19 QUANTITATIVE TECHNIQUES FOR MANAGEMENT
Time: 3 Hours
Total Marks: 100
Note: 1. Attempt all Sections. If require any missing data; then choose suitably.
SECTION A

1. Attempt all questions in brief.
$2 \times 10=20$
Marks CO
a. What are the tools of operation research?

21
b. Give some uses of operation research.

21
c. What are the applications of Linear Programming in Management? 2
d. What do you mean by Initial Basic Feasible solutions of a transportation 2 problem?
e. Distinguish between Assignment and Transportation problem. 2
f. What do you mean by saddle point? 2
g. Define a sequencing problem. 2
h. What do you mean by arrival rate and service rate in Queuing theory? 2
i. What is the importance of replacement? 2
j. Explain time estimates in PERT.

## SECTION B

2. Attempt any three of the following:
a. Discuss the significance and scope of Operation Research in business 10 and industry.
b. A company produces two types of presentation goods A and B that require gold and silver. Each unit of type A requires 3 grams of silver and 1 gram of gold while that of $B$ requires 1 grams of silver and 2 grams of golds. The company can procure 9 gms of silver and 8 gms of gold. If each unit of type A brings a profit of Rs. 40 and that of type $B$ Rs. 50. Determine the number of units of each type that should be produced to maximize the profit. Indicate the feasible region on a graph paper.
c. For the following game find optimal strategies of A and B and value of 10 the game using principle of dominances.

Player B

Player A

|  | $\mathrm{B}_{1}$ | $\mathrm{~B}_{2}$ | $\mathrm{~B}_{3}$ | $\mathrm{~B}_{4}$ |
| :--- | :---: | :---: | :---: | :---: |
|  | $\mathrm{~A}_{1}$ |  |  |  |
| $\mathrm{~A}_{2}$ | -4 | 6 | 8 | 9 |
|  | -4 | -3 | 9 | 10 |
| $\mathrm{~A}_{4}$ | 3 | 0 | 4 | 2 |
|  | 10 | 5 | -2 | 0 |
|  |  |  |  |  |

d. At a service centre customers arrive at the rate of 10 per hour and are served at the rate of 15 per hour. Their arrival follows poisson distribution and service is exponentitally distributed. Find the average length and average waiting time in the system.
e. Why does the problem of replacement arises? What is individual \& 10 group replacement?

## SECTION C

## 3. Attempt any one part of the following:

Marks CO
a. Discuss the historical background of Operations Research.
$10 \quad 1$
b. Discuss briefly the limitations of operation research techniques.
$10 \quad 1$
4. Attempt any one part of the following:
a. $\operatorname{Max} Z=30 x_{1}+40 x_{2}+20 x_{3} \quad 10 \quad 12$
s.t. $10 \mathrm{x}_{1}+12 \mathrm{x}_{2}+7 \mathrm{x}_{3} \leq 10,000$
$7 \mathrm{x}_{1}+10 \mathrm{x} 2+8 \mathrm{x}_{3} \leq 8000$
$\mathrm{x}_{1}+\mathrm{x}_{2}+\mathrm{x}_{3} \leq 1000$
Where, $\mathrm{x}_{1}, \mathrm{x}_{2}, \mathrm{x}_{3} \geq 0$
b. A Cement factory manager is considering the least way to transport 10

10
cement from his three manufacturing centres $\mathrm{P}, \mathrm{Q}, \mathrm{R}$ to depots $\mathrm{A}, \mathrm{B}, \mathrm{C}$,
D and E . The weekly production and demands alongwith transportation costs are given below.

| To <br> From | A $\quad$ B $\quad$ C $\quad$ D $\quad$ ESupply <br> (Tons) |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| P | 4 | 1 | 3 | 4 | , | 60 |
| Q | 2 | 3 | 2 |  | 3 | 35 |
| R | 3 | 5 | 2 | 4 | 4 | 40 |
| Demand (Tons) | $\begin{array}{lllll\|l} 22 & 45 & 20 & 18 & 30 & 135 \\ \hline \end{array}$ |  |  |  |  |  |

What should be the distribution programme?
5. Attempt any one part of the following:

Marks CO
a. The XYZ Co. has 5 jobs to be done and 5 men to do these jobs. The no. 10 of hours each man would like to accomplish each job is given below:

Men

|  |  | L | M | N | 0 | P |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | A | 4 | 6 |  | 16 | 9 |
| Jobs | B | 5 | 8 | 16 | 19 | 9 |
|  | C | 9 |  |  | 21 | 13 |
|  | D | 6 |  | 9 | 11 | 7 |
|  | E | 11 | 11 | 16 | 26 | 11 |

Find the optimal schedule of the above problem.
b. Explain the theory of dominance in the solution of rectangular game.

## 6. Attempt any one part of the following:

Marks CO
a. Six jobs are performed first over machine I and then over machine II. 10

The order of the completion of the jobs has no significance. Find the sequence of the jobs that minimizes the total elpased time \& Also calculate the total clapsed time. The time of each job on each machine is given below.

| Job |  | 1 | 2 | 3 | 4 | 5 | 6 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Time in | Machine I | 4 | 8 | 3 | 6 | 7 | 5 |
| Hours | Machine II | 6 | 3 | 7 | 2 | 8 | 4 |

b. Explain the important assumptions of a queuing model.
7. Attempt any one part of the following:

Marks CO
a. A transport com. buys road tankers costing Rs. 50,000 each. From the

105 data below advise management when a tanker should be replaced.

| Year | 1 | 2 | 3 | 4 | 5 | 6 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Operating Cost (Rs.) | 7500 | 8000 | 8500 | 9000 | 10000 | 12250 |
| Resale Price (in Rs.) | 45000 | 40,500 | 37,500 | 36000 | 34500 | 33250 |

b. Calculate average expected time, and draw network for a project with 105 the following activity times.

| Activity | Op. time (in <br> hrs.) | Time (in <br> Hrs.) | Mixed Lotelly <br> time (in hour) |
| :---: | :---: | :---: | :---: |
| $2-4$ | 1.0 | $5 \cdot 0$ | 3.0 |
| $2-6$ | 1.0 | $7 \cdot 0$ | 4.0 |
| $4-8$ | 4.0 | 16.0 | 7.0 |
| $6-8$ | 1.0 | 5.0 | 1.5 |
| $8-10$ | 1.5 | 14.5 | 3.5 |

Also calculate the variance and standard derivation of the project.
